Flexo Shower-toilet chair with removable footrests

Caring for clients / residents on a traditional shower-toilet chair is very cumbersome. The caregiver will be forced to stand in an unnatural position and has to cope with static back strain. Lopital offers assistance with the height adjustable Flexo shower-toilet chair.

Flexo provides comfort and safety to the caregiver as well as the client / resident. Back strain will be limited to a minimum, thanks to the flexible height adjuster. With this feature Flexo also makes an important contribution to occupational and safety health policy within the healthcare sector.

When Flexo is set at the highest position, caregiver and client / resident are able to make eye contact. The chair will reach automatically the maximum inclination, thereby ensuring optimal client / resident safety. The special Flexo design enables the chair to be wheeled directly over the toilet, provided it is on the correct setting.

Easy to maintain eye contact with adjustable height.

High / low control by foot pump.

Standard frontlocking armrests.
